ROHIT RANVIR

Maharashtra, India | +91-9158000676 | rohitranveer358@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Generative AI Engineer with hands-on experience designing and deploying LLM-powered solutions, RAG architecture, and autonomous agentic AI systems using Python, LangChain, Groq LLaMA 3, and Hugging Face. Skilled in prompt engineering, REST API development, deep learning (LSTM, CNN, XGBoost), and end-to-end ML pipeline deployment with MLOps best practices. Proven ability to translate AI capabilities into client-ready solutions and interactive dashboards that drive measurable business outcomes. Eager to contribute to digital transformation initiatives within Infosys Data and Analytics Unit.

TECHNICAL SKILLS

Generative AI: Generative AI, LLM Integration (Groq LLaMA 3, Hugging Face), LangChain, RAG Architecture, Prompt Engineering, Agentic AI, Autonomous Agents, ReAct Framework, Tool-Calling

Programming: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL (MySQL, SQLite, PostgreSQL)

Machine Learning: TensorFlow, Keras, PyTorch, LSTM, CNN, XGBoost, Random Forest, NLP, Sentiment Analysis, Time-Series Forecasting, Scikit-learn Pipelines, SMOTE, MLflow

APIs & DevOps: REST APIs, Flask, Docker (basics), GitHub Actions (CI/CD), Web Scraping (Playwright)

Data & BI: Power BI (DAX, Power Query), Streamlit, Plotly, MS Excel

Databases: SQLite, PostgreSQL, MySQL, NoSQL (basics)

Soft Skills: Client Interfacing, Stakeholder Reporting, Solution Design, POC Development, Problem-Solving, Team Collaboration

PROFESSIONAL EXPERIENCE

AI / Data Analyst Intern ***February 2026 –March***

Codesoft Private Limited | Maharashtra, India

- Developed interactive Power BI dashboards tracking 10+ KPIs, improving stakeholder reporting efficiency by 40% and enabling real-time data-driven decision-making — demonstrating client-interfacing and solution delivery capabilities.
- Conducted exploratory data analysis (EDA) on large enterprise datasets to identify actionable business trends, directly informing product and operations strategy through a structured consulting-style problem-to-solution approach.
- Automated end-to-end reporting workflows using Python, eliminating 100% of manual data-collection effort and saving 5+ analyst hours per week; presented the solution as a reusable POC to senior stakeholders.

KEY PROJECTS

Job Agent — Autonomous Agentic AI System ***GitHub***

Python | LangChain | LLM API (Groq LLaMA 3, Hugging Face) | ReAct Framework | Prompt Engineering | JSON Queues | Automation

- Architected an autonomous AI agent using LLM tool-calling and ReAct-style orchestration to automate multi-step job application workflows — demonstrating advanced Generative AI, agentic AI, and prompt engineering expertise.
- Designed a modular tool architecture enabling the agent to invoke specialized functions (search, extract, submit) independently, showcasing deep understanding of LLM capabilities, RAG patterns, and autonomous decision-making design.
- Implemented fault-tolerant queue management and logging to handle pipeline failures gracefully, reducing manual intervention in repetitive workflows and demonstrating production-grade, enterprise-scale system design.

Hyperlocal Air Quality Forecasting — End-to-End ML Pipeline ***GitHub***

Python | PyTorch | LSTM | XGBoost | OpenAQ API | Open-Meteo API | Streamlit | MLflow | Plotly

- Engineered a complete ML pipeline ingesting real-time data via REST APIs (OpenAQ, Open-Meteo), preprocessing sequences, and performing LSTM-based multi-step time-series forecasting — showcasing full MLOps lifecycle delivery.
- Trained a hybrid LSTM + XGBoost ensemble with measurable accuracy improvements over single-model baselines; tracked all experiments using MLflow for reproducibility and client-presentable model comparison documentation.
- Deployed an interactive Streamlit dashboard with Plotly visualizations for historical trends, forecasts, and pollution alerts — analogous to building client-facing AI solution demonstrations and proof-of-technology workshops.

Healthcare Fraud Detection — Predictive Modeling on Imbalanced Data ***GitHub***

Python | Scikit-learn | XGBoost | SMOTE | Flask REST API | Pandas | Logistic Regression | Random Forest

- Built a fraud detection classifier on a highly imbalanced healthcare dataset using SMOTE oversampling and class-weight tuning to maximize recall on minority fraud cases — a critical metric for financial and health-tech AI solutions.
- Evaluated Logistic Regression, Random Forest, and XGBoost using ROC-AUC and precision-recall curves with rigorous cross-validation and threshold tuning to select the optimal production model.
- Deployed the trained model as a Flask REST API with structured JSON responses and sub-200ms inference latency, demonstrating ability to build and expose AI models as enterprise-consumable API services.

EDUCATION

B.E. in Computer Science and Engineering ***August 2021 – May 2025***

Babasaheb Naik College of Engineering, Pusad | Amravati University, Maharashtra ***CGPA: 7.5***

Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing (NLP), DBMS, Data Structures and Algorithms, Statistics, Computer Networks

HSC (12th) — Atahar Mirza High School Kali (D.K) **2021 | 79.83%**

SSC (10th) — Atahar Mirza High School Kali (D.K) **2019 | 69.00%**
